

ABSTRACT

The invention discloses a constant temperature sealed cooking device providing a conventional sealed cooker with constant temperature cooking effects. The constant temperature sealed cooking device is
5 devised with a constant temperature generating apparatus at an inner lower portion of a heat resistant outer pot of the sealed cooking device. Using the constant temperature generating apparatus, a constant temperature within the inner pot is maintained to provide a desired cooked degree of food contained therein. Thus, the food prepared has
10 tastes approaching those of food cooked by a high-speed oxidized heat source as a primary object of the invention.
